1.0 EXECUTIVE SUMMARY

This Phase I Environmental Site Assessment (ESA) was completed on two parcels of land owned by Mitsubishi Chemical America, Inc. in Chesapeake, Virginia. They are located at 401 Volvo Parkway and an adjacent unaddressed parcel on Yupo Court (Parcel Numbers 0373010000390 & a portion of 0280000000790) (the "Property"). The Property included in this report is approximately 118 acres and contains one main building, woods, grassy areas, two stormwater ponds, drive aisles, and a parking lot. The on-site building contains vacant office areas and labs, occupied offices, and a large warehouse used by a tenant to store finished products (synthetic paper). The northern portion of the Property is proposed for residential development and the southern portion of the Property will remain commercial/ industrial. The center portion of parcel 0280000000790 (including Buildings 2 and 4) will remain occupied by Mitsubishi Chemical America, Inc. and is not included in the scope of this report.

This Phase I ESA has been performed by Bay Environmental, Inc. in conformance with the scope and limitations of ASTM Practice E 1527-13 on the above referenced Property in Chesapeake, Virginia. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has revealed no Recognized Environmental Conditions, Historical Recognized Environmental Conditions, Controlled Environmental Conditions, or items with the potential for migration in connection with the Property.

To the best of our knowledge the Property is suitable for residential or public use and the Property does not represent a significant risk to human health and the environment.

2.0 INTRODUCTION

2.1 Purpose/Scope of Services

Bay Environmental was contracted by Kotarides Developers, LLC to complete a Phase I ESA on the above referenced Property in Chesapeake, Virginia (Figure 1, Appendix A). The Phase I ESA has been completed in general accordance with the American Society of Testing and Materials (ASTM) Standard E 1527: *Standard Practice for Environmental Site Assessments* (2013).

Unless a different purpose is stated under "Section 2.4 User's Responsibilities:" The purpose of this Phase I ESA was to address the "*innocent landowner defense*" provision of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980 and "*all appropriate inquiry*" in preparation of due diligence investigations under the Superfund Amendments and Reauthorization Act (SARA) of 1986. This investigation included an examination of the Property and a review of records to determine if there were any RECs, as defined by ASTM E-1527-13, which would create environmental liability or limit the use of the Property.

The term "recognized environmental conditions" is defined in ASTM Practice E 1527-13 at Section 1.1.1 as:

"the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (1) due to any *release* to the *environment*; (2) under conditions indicative of a *release* to the *environment*; or (3) under conditions that pose a *material threat* of a future *release* to the *environment*. *De minimis* conditions are not *recognized environmental conditions*."

Additionally, the purpose of the Phase I ESA, in accordance with Section 16-106.B.3.h of the Chesapeake City Code, is to ascertain whether the Property represents a significant risk to human health and the environment and whether the environmental condition of the northern portion of the Property is suitable for residential or public use. The remainder of the Property is proposed to remain commercial/industrial.

2.2 Limitations and Exceptions

Photographs were not allowed in the warehouses in Building 1. The wooded portions of the Property south of the developed portion were primarily inspected from the perimeter of the Property due to illegal encampments encountered during the site visit. However, a thorough inspection of the wooded areas was conducted during a 2019 Phase I ESA by Bay Environmental on behalf of Mitsubishi Chemical America, Inc., which revealed minor dumping in the area. It is unlikely that significant changes have occurred since that time. This portion of the property is not proposed for residential development and therefore, is outside the portion of the Phase I ESA being reviewed by the City of Chesapeake. Stored materials, landscaping, dense vegetation, and parked vehicles precluded a thorough view of the Property. These limitations are not considered to be significant.

Adjacent properties were viewed from the Property and public thoroughfares. A thorough inspection of these properties was precluded by vegetation, fences, parked vehicles, and lack of access.

Business risk items, such as radon, lead based paint, asbestos, cultural and historic resources, wetlands, and mold, which are not a standard part of an ASTM Phase I ESA, were not included in this investigation unless specifically discussed as a "Non-Scope ASTM Item."

An evaluation of regulatory compliance was not included in the scope of this investigation.

No sampling or testing (for example water, soil, building materials, or air) was conducted during this Phase I ESA.

Per- and Polyfluoroalkyl Substances (PFAS) are not currently regulated by CERCLA as hazardous substances. Therefore, they are outside the scope of a Phase I ESA and are not included in the scope of this report.

2.3 Data Failure and Data Gaps

Aerial photographs and street directories were not reviewed for the years between or prior to the dates listed in this report. Review and description of these historical documents represents the best interpretation of the environmental professional. This is not believed to be a significant data gap.

Fire insurance maps were not available for this area of Chesapeake. This is not believed to be a significant data gap, as there are other historical sources.

The Property was not researched back to the first historic use, as the 1937 historical aerial photograph indicated that the Property had already been developed for agricultural use. This is not believed to be a significant data gap as the vicinity was less developed at the time and it is unlikely that a history use before that time would constitute a REC.

The tenants were not interviewed as part of this Phase I ESA. The owner representatives were very familiar with the tenant(s) and their operations. Therefore, this data gap is not believed to be significant.

The former property owner was not available for an interview. This is not believed to be a significant data gap because of the current owner's knowledge of the Property.

The City of Chesapeake has not responded to a Bay Environmental FOIA request as of this writing (a 7-day extension was added to their response timeframe due to technical errors). Section 5.0 includes information obtained during the 2019 Phase I ESA; However, this is a data gap, and an addendum will be issued for this report upon receipt of the City's response.

2.4 User's Responsibilities

According to ASTM Standard E-1527-13, the "user" of this report should provide the following information:

- Provide chain of title information with environmental liens and activity or use limitations
- Provide information to the environmental professional if the user has specialized knowledge or experience relevant to RECs in connection with the Property
- Provide information to the environmental professional if the user has actual knowledge relevant to RECs in connection with the Property
- Provide information to the environmental professional if the user has knowledge of a lower purchase price due to hazardous substances or petroleum, if applicable
- Provide information to the environmental professional if the user has commonly known or reasonably ascertainable information relevant to RECs in connection with the Property
- Degree of obviousness of releases or threatened releases at the Property and the ability to detect releases or threatened releases by appropriate investigation
- Provide reasoning to the environmental professional for the purpose of the Phase I ESA.

The user of this report has provided most of this information through the User Questionnaire included in Appendix D. Specifically, Daniel Blevins, representative of Kotarides Developers, LLC, completed the User Questionnaire and provided title documents for review.

3.0 SITE INSPECTION

3.1 Methodology

Sara Howard and Caroline Behrman of Bay Environmental, Inc. inspected the Property on June 21, 2021. The Property was inspected by walking throughout Building 1 and the fire pump houses. The perimeter of the building, parking areas, and the drive aisles were inspected by driving, stopping as needed. The wooded portion of the Property south of the developed area was primarily inspected from the access road on the north end of the site and from the electrical substation to the west. Mr. Les Ferguson, Facilities Engineer for Mitsubishi Chemical America, Inc., provided a tour of the Property.

3.2 General Site Information

Table 1 below summarizes general information regarding the Property and surrounding properties. Figures 2 and 3 (Appendix A) and Photographs 1 – 14 depict the Property.

3.3 Site Inspection and Recognized Environmental Conditions

Bay Environmental inspected the Site with regard to potential RECs. Table 2 lists the items inspected; a narrative of the findings follows.

Table 2: Visual Inspection Checklist.

Hazardous Substances and Petroleum Products in Connection with Identified Uses		
Aboveground Storage Tanks (ASTs)/Fill-Vent Lines	✓	
Underground Storage Tanks (USTs)/Fill-Vent Lines

Other Hazardous Substances and/or Petroleum Related Items		

The following items were observed during the site visit:

- One approximately 200-gallon diesel aboveground storage tank was observed in the diesel fire pump house, north of Building 1. This AST was inside the house, and inside secondary containment. No evidence of leaks or spills was observed in its vicinity. Therefore, no further assessment is believed to be warranted.

Photograph 10: Diesel AST in diesel fire pump house.

- Containerized materials and several 55-gallon drums were observed in the warehouse portions of the building and in the electric fire pump house. The containerized materials were primarily paints and primers. The 55-gallon drums were observed were all empty, according to Mr. Ferguson. "Flammable" cabinets were observed in various locations throughout the building.

Photograph 11: Containerized Materials and Drums.

Photograph 12: Representative View of Flammable Cabinets.

- Seven pad-mounted electrical transformers were observed during the site visit. “Non-PCB” containing labels were observed on several of the transformers. All transformers appeared in good to fair condition, and no evidence of leaks or spills was observed in their vicinity. Therefore, no further assessment is believed to be warranted.

Photograph 13: Representative view of on-site pad-mounted electrical transformer.

- Minor dumping in the form of trash (primarily glass bottles) and tires was observed in the on-site woods. These materials are inert in nature and *de minimus* in quantity. Therefore, no further assessment is believed to be warranted.

Photograph 14: Representative photo of dumped tires.

No on- or off-site RECs were observed during the property inspection.

3.4 Chapter 17 PFM Potential Jurisdiction Items

Bay Environmental, Inc. reviewed the Property with respect to items discussed as potential jurisdiction items in Chapter 17 of the Public Facilities Manual. No on-site or off-site RECs were identified within the 1/10 mile search.

The following items were not observed during site reconnaissance or research of the Property or adjacent parcels:

- Releases such as spills of hazardous materials or petroleum
- CERCLA investigations
- CERCLA or NPL listing
- Significant petroleum or oil releases
- RCRA permits
- Other environmental permits
- Enforcement actions
- Dumping meeting the "Open Dump" criteria
- Waste generation
- Beneficial re-use of waste
- Immediate risk of impacts
- Impacts to water resources

Three RCRA Generator permits are associated with parcel number 028000000790:

- Permit number VAD988169934 was activated in 1992 and is associated with former manufacturing operations in Building 1. The facility was registered as a Large Quantity Generator until production activities ceased in 2008. Since then, this permit has been registered as a Conditionally Exempt Small Quantity Generator.
- Permit number VAR000006809 was activated in 1989 and is associated with former photographic film, paper, plate, and chemical manufacturing. This permit was likely associated with operations in Building 1 or former Building 3 (on-site). The facility was registered as a Conditionally Exempt Small Quantity Generator until operations ceased in 2016 and the permit status was changed to non-generator.
- Permit number VAD988204103 was activated in 1991 and appears to be associated with operations in Building 2 (off-site).

On-site operations historically had an Air Permit, but the permit was terminated when operations ceased. The facility also has been subject to Toxic Substances Control Act (TSCA) reporting requirements. In addition, they have a permit to discharge to the Hampton Roads Sanitation District (HRSD).

Other waste activity, in the form of *de minimus* dumped materials, was observed on-site. Please refer to Section 3.3 of this report for more information.

The Property was part of the former Greenbrier Farms Nursery, based on historical aerial photographs and Bay Environmental's knowledge of the area. The northern portion of the Property has been developed for commercial/ industrial use since the late 1980s and is the only portion of the Property proposed for residential development. It is Bay Environmental's professional opinion is that no further investigation of the former nursery is warranted.

4.0 RECORDS REVIEW

4.1 Regulatory Database Review

Information from federal and state database records was obtained from Environmental Data Resources, Inc. (EDR). See Appendix B for complete database details.

The properties listed in this table are those Bay Environmental has deemed as having potential for impact(s) to the subject property. Please see Appendix B for a complete listing of properties within the minimum search distance. Please also see Appendix B for definitions of acronyms.

Based upon the Federal database review, eight federal listings exist within the minimum search distances.

On-site

Three RCRA Generator ID numbers exist for the Mitsubishi manufacturing campus at 401 Volvo Parkway:

- Permit number VAD988169934 was activated in 1992 and is associated with former manufacturing operations in Building 1. The facility was registered as a Large Quantity Generator until production activities ceased in 2008. Since then, this permit has been registered as a Conditionally Exempt Small Quantity Generator.
- Permit number VAR000006809 was activated in 1989 and is associated with former photographic film, paper, plate, and chemical manufacturing. This permit was likely associated with operations in Building 1 or former Building 3 (on-site). The facility was registered as a Conditionally Exempt Small Quantity Generator until operations ceased in 2016 and the permit status was changed to non-generator.
- Permit number VAD988204103 was activated in 1991 and appears to be associated with operations in Building 2 (off-site). The facility is registered as a Large Quantity Generator.

A review of DEQ files revealed numerous inspections of each portion of the facility since they began operation in the early 1990s. A majority of the inspections found the facilities to be in compliance with RCRA Hazardous Waste Management Regulations; however, occasionally paperwork or storage practices violations were identified. DEQ files indicate that the facilities promptly corrected violations each time and the facilities returned to compliance. Therefore, no further assessment is believed to be warranted.

Off-site

The Old Greenbrier Site is listed as a SEMS Archive site. Based on information obtained through the City of Chesapeake FOIA response during the 2019 Phase I ESA by Bay Environmental on behalf of Mitsubishi Chemical America, Inc., it appears that this facility was historically located north of the Property, currently the Dollar Tree Headquarters. Phase I Environmental Site Assessments performed by McCallum Testing Laboratories on the Dollar Tree Office and Distribution Center in December 2010 and in November 2012 state that the Old Greenbrier Site" was comprised of two liquid filled impoundments that existed from the 1950s through the 1960s. They were filled in 1970. The report included soil sample results of the area and determined that it was a Historical Recognized Environmental Condition to the Dollar Tree Headquarters facility. A 2013 Phase II ESA that consisted of groundwater sampling was conducted by McCallum Testing Laboratories as well. This report also did not reveal concentrations of concern in the groundwater. Therefore, it is not likely that it impacted nearby properties.

The City of Chesapeake Public Works facility at 930 Hollowell Lane is listed as a RCRA CORRACTS site and a RCRA non-CORRACTS TSD facility. This facility is 0.315 miles from the Property and is across hydraulic barriers. The EDR database reports that migration of contaminated groundwater is under control and human exposure is under control. The TSDF

section of the EDR database further indicates that the facility is not currently generating, treating, or disposing of hazardous waste. Therefore, no further assessment is believed to be warranted.

The former NOAA AOS US Department of Commerce facility at 808 Principal Ct and Yupo Corporation America are registered as RCRA CESQG. The NOAA facility is no longer in operation and is across a hydraulic barrier from the Property. Yupo Corporation is adjacent south and downgradient from the Property. The EDR database states that no violations have been found at either site. Therefore, no further assessment of these two listings is believed to be warranted.

The properties listed in this table are those Bay Environmental has deemed as having potential for impact(s) to the subject property. Please see Appendix B for a complete listing of properties within the minimum search distance. Please also see Appendix B for definitions of acronyms.

A review of the State database revealed twenty-eight listings within the minimum search distances of the Property:

On-site

Mitsubishi Chemical was the location of a spill on September 28, 2004. There was an equipment fire which caused a release to the air. The exact location of the fire on the Property is unknown. Because this fire was 17 years ago and because the impacted media was air, no further assessment is believed to be warranted.

Off-site

The City of Chesapeake SPSA Transfer Station located at 901 Hollowell Lane is a registered Solid Waste Facility/Landfill. A transfer station is a place where waste is temporarily stored before transfer to larger vehicles for transportation to a waste disposal facility. Because it is not an actual waste disposal facility and because it is not on or adjacent to the Property, no further assessment is believed to be warranted.

27 LUST Cases at 24 sites exist within the minimum search distance of the Property. All of the LUST Cases have been closed by DEQ and none are within 1/8 mile of the Property. Therefore, no further assessment of these Cases is believed to be warranted.

Volvo Penta of America, located across Volvo Parkway from the Property, is the location of five registered aboveground storage tanks. All of the ASTs are currently in use and contain gasoline. No records leaks (LUST Cases) exist for this facility. In addition, this facility is down gradient from the Property. Therefore, no further assessment is believed to be warranted.

The DI Fleet Fueling facility (Domestic Fuels), located east of the Property on Professional Place, is the location of three USTs. These USTs are across a stormwater pond, a hydraulic barrier, from the Property and no leaks have been reported. Therefore, no further assessment is believed to be warranted.

The database revealed 2 unmapped ("orphan") listings within the minimum search distances of the Property, including an on-site spill. The orphan listings are included in the discussions above.

4.2 Historical Use Records

4.2.1 Title Records

Title records were provided by the User of this report for review. A review of these records indicates that Mitsubishi has owned parcel number 0280000000790 since purchasing from Greenbrier Associates in 1988. Mitsubishi purchased parcel number 0373010000390 from FH Properties No 11, Inc. in 1992. The title records included documentation for the Virginia Electric and Power overhead power easement running through the Property, as well as documentation for a Right of Way along Volvo Parkway.

4.2.2 Fire Insurance Maps

Based on a review of Sanborn Fire Insurance Maps by Environmental Data Resources (EDR), no coverage of the area is available for this Property (Appendix C).

4.2.3 Aerial Photographs

Aerial photographs reviewed for this Phase I ESA were obtained from Google Earth and the Hampton Roads Planning District Commission for the years 2018, 2011, 2006, 2002, 1994, 1981, 1964, 1958, 1949, and 1937 (Appendix C). A summary of findings is as follows:

The on-site facility began operations between 1981 and 1994, based on aerial photography. The number of buildings on-site has changed over time. No RECs were identified the review of aerial photography.

4.2.4 Tax Files

Based on a review of City of Chesapeake Real Estate Assessor records, both parcels of the Property are currently owned by Mitsubishi Chemical America, Inc.

4.2.5 Building Department Records

Building Department records obtained through the City of Chesapeake Real Estate Assessor indicate that a portion of what is now identified as Building 1 was constructed in 1989. Additions were added to Building 1 in 1994, 1995, and 1997. Additional building information is included in the Real Estate Assessor for Parcel Number 028000000790 that is not believed to be within the boundary of this Phase I ESA report; This information includes construction information for Building 2 and four "bulk storage tanks."

4.2.6 Zoning/Land Use

According to the City of Chesapeake's Real Estate Assessor records, both parcels are zoned PUD for Planned Unit Development.

4.2.7 Street Directories

A street directory review was conducted at the City of Chesapeake Central Library for the years 2017 through 1992. Directories were reviewed at approximately five-year intervals. Mitsubishi Chemical America has been on-site since at least 1997. The 2017 directory listed Alpolc AMC Panels Swedish, Mitsubishi Chemical Holdings, and Mitsubishi Kagaku Imaging Corp on-site. The address was not listed in the 1992 directory.

4.3 Physical Setting Sources

4.3.1 Topographic Map

A review of the *Fentress, Kempsville, Norfolk South, and Deep Creek, Virginia* topographic maps (USGS, 1994) revealed that the Property has an approximate elevation of 20 feet above sea level. The maps were also interpreted to show that groundwater flow is in an easterly direction toward adjacent stormwater ponds in the Greenbrier Commerce Park. These ponds ultimately flow in a northerly direction to the Indian River, a tributary to the Eastern Branch of the Elizabeth River. Drainage ditches, unimproved roads, one building, and two ponds exist on-site in the topographic map.

4.3.2 Geologic Map

The subject property is located within the Coastal Plain Physiographic Province of Virginia. A review of the *Geologic Map and Generalized Cross Sections of the Coastal Plain and Adjacent Parts of the Piedmont, Virginia* (Mixon and Others, 1989) revealed that the site has been mapped as the Sedgefield Member of the Tabb Formation, an upper Pleistocene pebbly to boulder, clayey sand and fine to medium, shelly sand grading upward to sandy and clayey silt.

4.3.3 Groundwater Map

A review of the *Groundwater Map of Virginia* (Virginia Water Control Board, 1985) revealed that the Property lies within the Coastal Plain Ground Water Area. This area is composed of unconsolidated sediments of Cretaceous to recent age overlying a bedrock basement. The sediments thicken eastward from a feathered edge at the Fall Zone to 7,000 feet along the coastline. Sediments dip gently eastward and are subdivided into four major aquifers from the land surface downward. The Aquifers are separated by confining beds, which restrict but do not prevent vertical flow of groundwater.

4.3.4 Soil Survey Map

The USDA Natural Resource Conservation Service reports that the Property contains the following eight soil types: Deloss-Tomotley-Nimmo complex, Dragston-Tomotley complex, Tomotley-Deloss complex, Tomotley-Deloss-Urban land complex, Tomotley-Nimmo complex, Tomotley-Urban land-Nimmo complex, Urban land, and Urban land-Deloss-Tomotley-Nimmo complex (Figure 4, Appendix A).

4.4 Previous Environmental Reports

A representative of Mitsubishi Chemical America, Inc. (property owner) gave permission for Bay Environmental to utilize information from a previous Phase I ESA conducted on their behalf in 2019 as part of this assessment. The Phase I ESA was conducted by Bay Environmental (dated September 23, 2019) on parcel numbers 0373010000390 and 0280000000790 and included Buildings 2 and 4. The 2019 Phase I ESA did not reveal any Recognized Environmental Conditions.

5.0 INTERVIEWS

Sara Howard and Caroline Behrman of Bay Environmental interviewed the following individuals regarding property history and hazardous substances and/or petroleum products use, storage, and/or disposal at the Property:

- Daniel Blevins, Kotarides Developers, LLC, User of this report
- William Yannetti, Mitsubishi Chemical America, Property Owner
- Les Ferguson, Mitsubishi Chemical America
- City of Chesapeake FOIA Office
- Department of Environmental Quality, Tidewater Regional Office

Mr. Blevins completed the User Questionnaire, which revealed that he is not aware of any RECs or conditions which may indicate the presence of RECs on-site.

Mr. Yannetti completed the Owner Questionnaire, which revealed that he is aware of current and past uses of the Property. Mr. Yannetti stated that chemicals related to the manufacture of organic photoconductors and toner for printers and copiers formerly existed on-site. These operations no longer occur on-site. He also stated that there is a Right of Way Agreement between Mitsubishi Chemical America and Inc. and Virginia Electric and Power Company currently in development to address power requirements for a new building under construction, as well as power and natural gas easements on-site. Mr. Yannetti stated that he is not aware of any spills or contamination on-site.

Mr. Ferguson provided Bay Environmental personnel with access to the Property and a tour of the facility on June 21, 2021. He stated that a tenant currently stores finished products (synthetic paper) on-site. Building 1 is currently operated as a warehouse and offices. No manufacturing occurs anymore. Manufacturing operations in Building 1 ceased in 2016. Mr. Ferguson stated that 55-gallon waste drums were disposed prior to the site visit.

The City of Chesapeake has not responded to a Bay Environmental FOIA request as of this writing (a 7-day extension was added to their response timeframe due to technical errors). An addendum will be issued for this report upon receipt of the City's response. The following information was obtained during a 2019 Phase I ESA on the Property by Bay Environmental on behalf of Mitsubishi Chemical America, Inc.:

The City of Chesapeake forwarded the FOIA request to the Fire Department. They responded that they do not have any records of USTs, ASTs, and/or hazmat or petroleum incidents at 401 Volvo Pkwy. The Fire Department maintains records by street address; therefore, they were unable to search for the unaddressed parcel.

The City of Chesapeake also forwarded the FOIA request to the Public Works Department. Their response included the Phase I & II ESAs on the Dollar Tree Office and Distribution Center that are discussed in Section 4.1 regarding the "Old Greenbrier Site." In addition, the Public Works Department's Hazardous Materials GIS mapping was provided for the Property and its vicinity. This revealed that a site identified in the United States Environmental Protection Agency's Inventory of Potential Hazardous Waste Sites (IPHWS), Elizabeth River Area, Virginia Volume 1 (September 1987) exists

on-site. This site is labeled KV123 and is described as “stockpiled objects, refuse and ground stains on an industrial facility” in 1958. In 1964 and 1970 it notes that the area has expanded to the south and truck trailers are parked. The 1981 note states that buildings remain but all other features previously mentioned are not evident. In 1986 it notes that ground stains are evident. These observations are all prior to Mitsubishi’s purchase and development of the Property. Therefore, it is likely that any areas that contained ground stains observed greater than 30 years ago have been redeveloped. Therefore, no further assessment is believed to be warranted. It is noted that the surface impoundments discussed in Section 4.1 as the “Old Greenbrier Site” were identified in EPA’s IPHWS as well. No additional sites were identified through the Public Works Hazmat GIS map, or that were not previously discussed in Section 4.1.

DEQ, TRO, responded to a FOIA request with records of RCRA Generators. Refer to Section 4.1 for a summary of pertinent information.

Appendix D contains documentation from the interviews.

6.0 CONCLUSIONS

This Phase I ESA has been performed by Bay Environmental, Inc. in conformance with the scope and limitations of ASTM Practice E 1527-13 on the above referenced Property in Chesapeake, Virginia. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has revealed no Recognized Environmental Conditions, Historical Recognized Environmental Conditions, Controlled Environmental Conditions, or items with the potential for migration in connection with the Property.

To the best of our knowledge the Property is suitable for residential or public use and the Property does not represent a significant risk to human health and the environment.

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

CEDS (Virginia - Comprehensive Environmental Data System) is the Department of Environmental Quality's (DEQ) electronic data system for maintaining databases on sources of pollutants in all media.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.
